

Learning Management Platform

Extensive Language Support

Language support in practically every country around the world

As enterprises expand into global markets, centralized employee or channel training can become challenging. VenU 5™ not only supports numerous platform languages by default, but it also provides built-in language management tools for custom text that translators can use to find, add, and update language files in real-time. Additionally, integrations with Bing and Google Translation services provide users the ability to translate user input text (e.g. forums, wikis, chats, etc.) into their preferred language with just one click – ensuring ease-of-use no matter the user's locale while expediting course completion.

Find, add, and update language files in real-time.
